Final Project

Research Project Digital Showcase and Commercialization Profile

Objective

- : The objective of this final project is to enable students to transform their year-long research project into a professionally presented digital commercialization profile that communicates the project's purpose, innovation, practical relevance, and future potential to both academic and non-academic audiences.

Through this task, students are expected to demonstrate their ability to present research as a public-facing digital experience, integrating visual communication, digital storytelling, user-focused presentation, and commercialization thinking within a hosted online platform.

Percentage of overall : 15%
Duration : 10th May 2026, by 1800 hrs.
Assignment type : Individual
Assignment created by: Mr. Aruna Ishara Gamage

Project Submission

- Projects need to be submitted as a link after hosting the final digital profile online.
- You are required to upload a TXT file containing the hosted web link to the assignment submission link on the course web.
- If applicable, supporting files such as downloadable documents, demo videos, brochures, posters, or repositories may be included as part of the hosted profile.

Project Overview

Students are required to design and host a **professional digital showcase platform** for their **year-long research project**.

The final output should function as a **public-facing digital profile** that presents the research project not only as an academic study, but also as a **potentially useful, deployable, and future-ready innovation**.

This hosted profile should communicate the project clearly to multiple audiences such as:

- academic evaluators
- industry stakeholders
- potential collaborators
- future researchers
- recruiters / employers
- or interested public users

This is **not just a website design task**.

It is a **research-to-commercialization translation exercise** where students are expected to convert their research into a **clear, compelling, and professionally presentable digital product profile**.

Task – Develop the Hosted Digital Commercialization Profile

Design and host a **full web-based profile** for your research project.

Your platform should communicate the project clearly, visually, and professionally while demonstrating its **research basis, innovation, practical application, and future potential**.

Your hosted digital profile must include the following sections.

1. Project Identity

This section should introduce the project clearly.

Include:

- Project title
- Tagline / short value statement
- Team members and roles
- Project overview
- Visual identity / branding elements (*if applicable*)

2. Problem and Need

This section should explain the purpose and significance of the project.

Include:

- The real-world problem being addressed
- Why this problem matters
- Who the intended users / beneficiaries are
- Existing gaps or limitations in current solutions

3. Solution Overview

This section should explain the proposed system / product / experience.

Include:

- What the project does
- Key features / functions
- What makes it innovative
- How it solves the identified problem
- A clear explanation understandable to a non-technical audience

4. Visual / Interactive Media Presentation

This section should present the project using strong digital media communication.

Include relevant items such as:

- Screenshots
- Diagrams
- UI mockups
- Storyboards
- Visual workflows
- Interaction flows
- Embedded videos / motion content
- Use-case visuals or demonstrations

This section should help the viewer **understand and experience the project visually**.

5. Prototype / Demonstration Section

This section should showcase the practical output of the project.

Include one or more of the following where applicable:

- Demo video
- Prototype screenshots
- Interactive preview
- Downloadable prototype / build
- Simulation clips
- Embedded product walkthrough

This section should clearly answer:

“What has actually been built or demonstrated?”

6. Research and Validation

This section should show the academic and investigative foundation of the project.

Include:

- Brief research background
- Methodology summary
- Testing / evaluation approach
- Validation methods
- Key findings / outcomes
- User feedback / experiment results (*if available*)

This section should demonstrate that the project is **research-informed and evidence-based**.

7. Commercialization / Future Potential

This is one of the most important sections of the project.

Include:

- Potential users / customers / institutions
- Practical implementation opportunities
- Industry or market relevance
- Future development possibilities
- Potential deployment pathways
- Long-term value or sustainability of the project

Students are expected to think beyond the academic prototype and reflect on how the project could move toward **real-world application**.

8. Download / Resource Repository

This section should provide selected supporting resources related to the project.

Possible downloadable items may include:

- Poster / brochure
- Research abstract
- Presentation slides
- User manual
- Technical documentation
- Research paper / publication draft
- GitHub repository / code sample (*if appropriate*)
- Other project assets

Final Deliverables

Your final submission should include:

1. Hosted Digital Profile

- Must be accessible through a working web link
- May be built using any suitable platform

2. Supporting Files (if applicable)

Optional or embedded resources may include:

- Demo video
- Poster / brochure
- Presentation slides
- Research summary
- Downloadable assets
- Repository / code samples (*if applicable*)

Creative Expectations

Students are expected to demonstrate the following through their work:

- effective digital storytelling
- clear visual communication of research
- strong layout and content organization
- audience-aware communication
- professional digital presentation
- thoughtful translation of academic work into a more public / practical format

Technical Expectations

Students are expected to apply the following practical standards:

- functional hosting and accessibility
- organized information architecture
- effective page layout and navigation
- proper use of embedded media and downloadable resources
- clean visual presentation
- a professionally structured and navigable digital experience

Recommended Platforms

Students may use any suitable platform such as:

- **Custom coded website**
- **GitHub Pages**
- **WordPress**
- **Wix**
- or any other suitable hosted web solution

Important Note:

This project is **not primarily assessed based on coding complexity.**

It is assessed based on the **quality, clarity, communication value, structure, and professionalism of the final digital outcome.**

Important Guidelines

- Your final work should function as a **professional digital showcase**, not just a collection of text placed on a webpage.
- Strong emphasis should be placed on **clarity, structure, visual communication, and audience understanding.**
- The platform should communicate both the **research foundation** and the **practical / future relevance** of the project.
- Your presentation should be understandable to a **general but intelligent audience**, not only technical examiners.
- The project should demonstrate **commercialization thinking**, even if the product is still at a prototype or research stage.
- Simple, clear, and well-structured platforms will score higher than visually overloaded or confusing designs.

Final Project

Research Project Digital Showcase and Commercialization Profil

	Exceeding Expectations	Good	Satisfactory	Poor	Marks Portions
	25 - 20	19 - 15	14 - 10	9 - 0	
Project Concept & Innovation [20]	The project is presented as a highly clear, meaningful, and innovative solution with strong real-world relevance and value.	The project is presented clearly with good relevance, purpose, and innovation.	The project idea is understandable, but innovation, clarity, or practical relevance is only partially developed.	The project lacks clear purpose, innovation, or meaningful presentation of value.	
Digital Presentation & UX Communication [20]	The hosted profile is highly professional, visually engaging, well-structured, and easy to navigate. Content is communicated exceptionally well.	The hosted profile is visually clear, organized, and communicates the project effectively.	The profile is understandable but shows weaknesses in structure, clarity, navigation, or presentation quality.	The profile is poorly structured, difficult to navigate, or weak in digital communication.	
Visual / Media Integration & Demonstration [20]	Excellent use of screenshots, diagrams, videos, prototypes, or other media to support understanding and presentation of the project.	Good use of media and supporting visuals to communicate the project and its functionality.	Basic use of visuals or demonstration materials is present, but integration or clarity is limited.	Visuals or demonstrations are missing, weak, or poorly integrated into the profile.	
Research Translation & Validation [20]	The platform demonstrates excellent translation of research into a public-facing format, with strong evidence of validation, findings, and academic grounding.	Research is translated clearly into a digital format with good evidence of validation and project grounding.	Some research and validation are presented, but the academic basis is only partially clear or effectively communicated.	Research basis, findings, or validation are poorly communicated or largely missing.	
Commercialization Thinking & Future Potential [20]	The project demonstrates highly thoughtful and realistic commercialization thinking, future development planning, and practical deployment potential.	Good commercialization thinking and future relevance are presented with reasonable clarity.	Some commercialization or future thinking is present, but it is limited, generic, or underdeveloped.	Little or no meaningful commercialization thinking or future development planning is demonstrated.
